Amazing Pollinators

COVID-19 Mitigation Strategies

We understand that the health and safety of your guests, volunteers, and staff is your top priority. Physical distancing and frequent sanitization will continue to be effective tools against the spread of COVID-19. With that in mind, we're sharing recommendations for how to more safely implement Minotaur Mazes traveling exhibitions in your facility.

Maze Layout and Design Notes

- Varying height maze walls act as partial barriers between visitors traveling in different corridors.
- Remove hard to clean or extra high-touch components. We recommend removing Dress-up clothes and Puppet Theater, and Hanging Slotted Panel entering Night Room for one-way flow.

Frequent Sanitation

- Add hand sanitizer stations at the Entrance/Exit of the Maze and in interactive areas as needed so guests can sanitize their hands before and after participating.
- Sanitize frequently touched surfaces throughout the day (interactives, prominent components).
- See Cleaning sheet <AP_Cleaning.Final.pdf> for additional component-specific recommendations.

Add Extra signage

- Encourage hand sanitizing at sanitizing stations.
- Encourage physical distancing generally and around specific exhibit components:
- Create Safety Signs to tell your visitors what you're doing to keep them safe and how they can protect themselves.

Sample Safety Sign content

For the safety of our visitors and staff:

- Exhibit surfaces are disinfected each day with interactive touch points disinfected throughout the day, using an EPA registered and green seal certified cleaner.
- Components that are difficult to clean have been removed.
- Please maintain a distance of 6 feet from other visitors throughout Maze and interactive areas.
- Please follow local requirements for use of masks.
- Hand sanitizing stations are provided throughout the exhibit for your use.
- User caution is recommended to minimize contact with surfaces and to sanitize hands during and after participation for general health and safety.
